

— Tech Tip —

Losing the Connection to the PRS RF Receiver

If your computer is allowed to go into *Sleep Mode* or *Suspend* after a Class has been started and joined, you will lose the connection to the RF Receiver, and the RF Clickers will no longer be joined to the Class.

A computer will go into Sleep Mode after a defined period of inactivity, during which no keyboard or mouse activity is detected. You can set the Energy Saving Properties for your computer in the Control Panel/Display option. As long as your computer receives a periodic mouse event, such as moving the mouse cursor, it will not go into Sleep Mode.
